which an error is output by the ladder circuit or the pair property deteriorates (5% - 17% pair dispersion). In the present invention, even if the resistive film thickness is 100-500 Angstroms, the pair defined by the under shape is restrained to a pair dispersion of less than 2% as shown in Fig. 3C.

It was asserted in the office action that the applicants have not properly asserted the superior results achieved by the recited ranges. In Figs. 2A and 3C, the applicants clearly show the superior results achieved by the recited taper angle and metal fin space, respectively.

In view of the foregoing, the applicants submit that this application is in condition for allowance. A timely notice to that effect is respectfully requested. If questions relating to patentability remain, the examiner is invited to contact the undersigned by telephone.

Please charge any unforeseen fees that may be due to Deposit Account No. 50-1147.

Respectfully submitted,
